Tell us about you! Your role, your interests in NLP, anything else you'd like to share with the community!

I work on a chatbot platform that uses advanced NLP techniques for semantic search and question answering.

Working as a enterprise search consultant. Currently my work is more focused on improving the relevancy of the search engine using machine learning/advanced nlp techniques.

I've been interested in NLP since 2000 or even earlier ;-) I am a researcher at AGH working in research project and teaching NLP. This year I will have lectures about NLP. I do my research mostly in the legal domain.

I work as a research engineer and focus on representation learning for NLP, Q&A and chatbots.

I'm doing some data science at work, NLP is primarily a hobby right now :)

I'm a software architect and I've been an interesting NLP for more than 15 years especially in question answering area.

Computational linguistics student currently based in Germany

Data Scientist, using Transformer models in simple solutions that the business can benefit in a short period of time

Data Scientist working mostly on classification, QA in banking

Tell us about you! Your role, your interests in NLP, anything else you'd like to share with the community!

Data Scientist not working currently with NLP, but looking forward to it

Tell us about what you want from this meetup - format, topics, presenters, anything else we should consider?

topic: deployment of transformer models

Real business use cases :)

Well, I think that the current format of the meetings works pretty well. Having international guests is a great idea.

Domain adaption, fine tuning / transfer learning techniques, smaller Language Models, deployment of Language models in production

Hope to be able to meet f2f at some point, but for now the online session are a good learning. Would like to meet people and chat what they're doing on day-to-day basis in NLP.

Topic : Production deployment of ML models

much smaller transformer models

advanced topics in NLP, both research and applied in a commercial settings

I looking for hints and ideas on how I can use the last success in NLP researches in my work in the industry. So presentation today was great.

Tell us about what you want from this meetup - format, topics, presenters, anything else we should consider?

theory + some crucial aspects of code. What works and what not. Series of meetups on chatbots.
